SAC votes \$1,000 for Citizen if council approves owners

SAC's external affairs commission voted 6-2 Thursday evening to grant \$1,000 to the Toronto Citizen if it is sold to new owners.

The grant, however, is "subject to review" and will depend on who the new owners will be.

Toronto Citizen writer Art Moses originally made a request for \$5,000 to the commission.

"We might give more," said SAC president Seymour Kanowitch, "depending on how many grant requests we get between now and the time the Citizen is sold."

A Serious Editorial The Toike Editor Wants to Know Why!

The editor of the Toike Oike, I went with Eng Soc President (then Steve Swigger) and VP Activities (Rhys Beak) to solicit funds from SAC, which I might add we got some of, with a review in January as to whether we get more. As you saw last Toike, what we got was \$750. Fine and we appreciate it.

As the above article points out, SAC's external affairs commission would grant the Citizen, a non-university paper, \$1000. Admittedly, this a different commission than the Toike deals with, but does a non-university paper deserve student money? Not only this, Seymour Kanowitch is quoted to say SAC may give more.

As a student, I gave, without being asked \$14 to SAC. Some of the things they do are great. Some not so great. But to give student money to the Citizen, I do not support. If they have \$1000 to squander then give it to The Mike or Strand, or some other university paper. Also, I would like to see in the Varsity (funded by \$44,000 of your money) detailed breakdown of where our money has gone and to what groups off campus our money has gone.

GODIVA'S BOX

My Richard.

Just a few lines to let you know that I am still alive. I am writing this letter slowly, because I know you can't read fast. You won't know the house when you come home — we've moved.

It was a lot of trouble moving — the most difficult thing was the bed. You see, the man wouldn't let us take it in the taxi. It wouldn't have been too bad if your father hadn't been sleeping in it at the time.

About your father — he has a lovely new job. He has 500 men under him. He's cutting the grass at the Cemetery.

Your sister got herself engaged to that fellow she's been going out with. He gave her a beautiful ring with three stones missing.

Our neighbours, the Browns, started to keep pigs. We got wind of it this morning. I got my appendix out and a dishwasher put in.

There was a washing machine in the new house when we moved in, but it is not working too good. Last week I put 4 shirts into it — pulled the chain — and haven't seen the shirts since.

Your little brother came home from school crying yesterday. All the boys in his school have new suits. We can't afford to buy him a new suit, but we're going to buy him a new hat and let him sit in the window.

Your sister Mary had a baby this morning. I haven't heard yet whether it is a boy or a girl, so I don't know if you are an Aunt or an

Uncle.

Your Uncle Amos was drowned last week in a vat of whiskey in Dominion Brewery. Four of his work mates dived in to save him but he fought them bravely off. We cremated his body and it took three days to put out the fire.

Kate is now working in a mill in Grand Falls. She's been there now for six weeks. I'm sending her some clean underwear as she says she's in the same shift since she started.

Your father didn't have much to drink at Christmas. I put a bottle of castor oil in his pint of beer. It kept him going until New Year's Day. I went to the Doctor on Thursday. Your father came with me. The Doctor put a small glass tube into my mouth and told me not to open it for 10 minutes. Your father offered to buy it from him.

It only rained twice last week. First for 3 days and then for 4.

Monday was so windy, one of our chickens laid the same egg 4 times.

We had a letter yesterday from the undertaker. He said if the last instalment wasn't paid on your Grandmother within 7 days, up she comes.

I must close now — because the plumber is coming here to repair the pipes and there's a shocking smell.

Your Loving Mother

P.S. — I was going to send you \$10.00, but I had already sealed the envelope.

you satisfied that you are a married man? 'Married for certain', returned Nasia, 'but not, by Hercules, to my entire satisfaction' (Quite comical.)

Dear Godiva:

If you dorks don't print this letter, I'm going to, come down there and heat the raspberries out of your noses. Okay snot-breath, now I got your attention, where the hell is my subscription? I sent my \$5.00 in two months ago and I still haven't seen that trashy paper you festering gob tits are supposed to send me.

Like I'm telling you twat-eyes, you try living in this rat-hole they call York. Its so bad here that we don't have any grass (and I mean grass, not that drug stuff you dork-chompers are always smoking) and my don is a faggot. If it wasn't for that paper I get from you, I'd go fucking crazy. So get me shit-eyes and get me straight get that rag of yours up here or I'll kick your halls around the block.

Mum

Dear Mr. Oike:

These are the pictures you ordered at \$2.00 amounting to \$44.00. If there are any you don't want send them back and I'll give you a refund, or if you want extra copies or enlargements send me the contact print or the print itself and I'll make up for you.

Please make cheque payable to: Robert Bellini

Sincerely yours,

P.S. - Pictures mailed under separate enclosure.
ED: Did we order anymore pics of Baker at McGill?

THE Engineering yearbook needs you

The 1974/75 yearbook drastically needs a new cover design and for this Creation (if yours is selected) you will receive \$25 in cash. This is open to all U of T students. Will you please leave prospective designs along with our name and phone number in the Yearbook Box in the Engineering Stores.

This years yearbook also needs staff members, to work on and take pictures for the yearbook. Would any interested people please leave your name and phone number in the Yearbook Box in the Engineering Annex Stores.

All Expense Paid Trip

This year under the auspices of Association of Professional Engineers of Ontario and Congress of Canadian Engineering Student, the University of Toronto Engineering Society will be sending delegates to two conferences. One conference will be in Ontario and the other in Calgary, Alberta.

All expenses will be paid for delegates by donations from industry and business. Due to the cost involved, only about five or six delegates may be sent. The main conference in Calgary for which we are now looking for delegates will be on January 9, 10, 11, 12 of the coming year (The topic is "The Social Impact of Engineering Projects"). Delegates will be involved in pre-conference meetings, fund raising interviews and post-conference presentations.

The selection of delegates will be made on the basis of participation in Society events, experience in

similar events, and on an application to be submitted by all prospective delegates. The application should include name, related experience, year, class, a one page expose of your ideas on the social impact of some current Canadian Engineering projects, and a half page summary of a paper that you would be willing to help research and write up for. Presentation by the U. of T. delegation to Calgary.

All applications will be evaluated by an independent person most probably a faculty member. Applications should be submitted, as soon as possible to the professional development mail box in the stores.

Further information may be obtained by leaving a note in the same mailbox. Copies of the publication of last year's conference will be available for inspection.

VP Administrative

At the Engineering Society Council Meeting of October 9, Andy Schwabe was acclaimed as VP Administrative. Keener points given for picking him out of the McGill pictures.

Engineering Sales

A seminar will be held on Thursday October 24, at 12 to 1, for Electrical, Mechanical, Civil, Nuclear and Thermal Power grads. The purpose of this seminar is to interest graduates in a career in Engineering Sales. Since this seminar is being presented by Trane Company of Canada, Ltd., there will be some emphasis on Engineering Sales in the Air Conditioning, Heating, and Heat Transfer Area.

The White Paper on Tax From the office of John Turner

To: The citizens of Canada
Re: New Canadian Tax Assessment

One thing Canada has not taxed is your male organ. Mostly because 90% of the time it is out of work and 10% it is in the hole. And twice it has 2 dependents, both of whom are nuts. However, beginning January 1, 1975, your penis will be taxed according to size as follows:

10-12 in	Luxury Tax
8-10 in	Pole Tax
6-8 in	Privilege Tax
4-6 in	Nuisance Tax

Check personal size to determine your category. Fill in the furnished form for tax purposes. Anyone under four inches is eligible for a refund.

PLEASE, NO EXTENSIONS GRANTED

Yours Sincerely
John Turner
Minister of Finance

Hewlett-Packard Pocket Calculators

The multifunction, professional-quality problem-solvers which put unprecedented computational power at your fingertips.

When Hewlett-Packard introduced the HP-35 scientific pocket calculator in January, 1972, it marked the first major advance in personal computing instruments since the slide-rule was invented a century ago.

Based on the latest developments in MOS/LSI technology and microprogramming techniques, the HP-35 provided features never before available in a pocket-portable calculating device. Like the log, trig and exponential functions required for most types of complex calculations. Like a four-register operational memory stack which automatically stores and retrieves intermediate answers. Like a 200-decade operating range and the ability to display numbers in either fixed-decimal or scientific notation.

Because of these and other unique features, the HP-35 quickly became an indispensable tool for tens-of-thousands of engineering and scientific professionals throughout the world. And today, these same design concepts have been refined and expanded into the family of four advanced pocket calculators described on these pages.

- the HP-35 scientific pocket calculator
- the HP-45 advanced scientific pocket calculator
- the HP-65 fully programmable pocket calculator

HP35: the first pocket calculator designed to fit the needs of today's engineering/scientific world.

Often called the "original electronic slide-rule," the HP-35 scientific pocket calculator offers features and functions not available on apparently similar models. Most important of these is the unique Hewlett-Packard four-register operational memory stack which automatically stores and retrieves intermediate answers during lengthy calculations and which virtually eliminates the need for scratch notes or the re-entry of data. Stack control keys permit roll-down of any entry to the display for review or further processing. The HP-35 also provides a separate, addressable storage register for selective storage or retrieval of constants or other data. Like all Hewlett-Packard pocket calculators, the HP-35 has a 200-decade range (10^{-99} to 10^{99}) and can display all numbers within this range with an accuracy of up to 10 significant digits while automatically positioning the decimal point.

Pre-programmed Functions

- **Arithmetic:** add, subtract, multiply, divide, square root.
- **Trigonometric** (decimal degrees): sine, arc sine, cosine, arc cosine, tangent, arc tangent.
- **Logarithmic:** common logarithm (base 10), natural logarithm (base e), natural antilogarithm (base e).
- **Other:** x^y , $1/x$, π , data storage and positioning functions.

Includes rechargeable batteries, AC adaptor and battery charger (115/230 VAC), soft case, self-adhesive owner name tags and Owner's Handbook.

HP45: an advanced scientific pocket calculator with additional pre-programmed functions, nine addressable memory registers.

The HP-45 scientific calculator is an advanced version of the popular HP-35 that offers many additional capabilities. In addition to the powerful operational stack, the HP-45 has nine addressable storage registers which can be used for register arithmetic as well as selective storage and retrieval of data. A 10th, "Last X" register automatically stores the last input argument permitting easy error correction or multiple operations on the same number.

The HP-45 performs all trig functions in any of three operating modes: decimal degrees, radians or grads. Answers in any of these modes can be converted to degrees/minutes/seconds and back again. A special key sets the display for either fixed-decimal or scientific notation, rounded to a specified number of decimal places (full accuracy is always maintained internally).

Pre-programmed Functions

- **Arithmetic:** add, subtract, multiply, divide, square root, square.
- **Trigonometric** (decimal degrees, radians or grads): sine, arc sine, cosine, arc cosine, tangent, arc tangent, rectangular/polar coordinate conversions, vector arithmetic, conversions between operating mode and degrees/minutes/seconds.
- **Logarithmic:** natural logarithm, natural antilogarithm, common logarithm, common antilogarithm.
- **Statistical:** mean, standard deviation, sum-of-the-squares, factorial.
- **Other:** y^x , $1/x$, π , $\%$, $\Delta\%$, metric/U.S. unit conversion constants, register arithmetic, data storage and positioning functions.

Includes rechargeable batteries, AC adaptor and battery charger (115/230 VAC), soft case, self-adhesive owner name tags, Owner's Handbook, and Quick Reference Guide. Also available in a printing, desktop version, the HP-46

HP65: a fully programmable pocket calculator which can make life easier for anyone who solves the same problem again and again.

Hewlett-Packard's newest and most advanced pocket calculator is the HP-65, a fully programmable instrument which features a built-in magnetic card reader/writer, a 100-step program memory, 51 pre-programmed functions and operations and nine addressable memory registers. These capabilities allow the HP-65 to be used three ways:

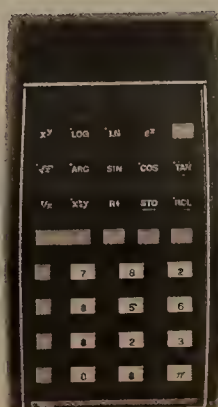

1. As a **user-programmed calculator**, the HP-65 lets you program up to five functions callable from the keyboard or by other programmed functions; conditional skips based on logic comparisons; and branches. You can also edit any program and save it on a magnetic card for future use.
2. With **pre-recorded program cards** from Hewlett-Packard, the HP-65 can be used by anyone to solve complex problems in such fields as electrical engineering, statistics, mathematics, medicine and surveying. Simply select the right pre-recorded program card, and start the program. A current catalog of HP-65 Application Packs, each of which contains up to 40 pre-recorded program cards, can be obtained.
3. Even as a **keyboard operated calculator**, the HP-65 can perform all trig functions in three angle modes, handle logarithms, and permit register arithmetic. Other pre-programmed functions include: factorial, polar/rectangular coordinate conversions, square-root, square, reciprocal, decimal/octal integer conversions, and the ability to add or subtract degrees/minutes/seconds.

Includes rechargeable batteries, AC adaptor and battery charger (115/230 VAC), Standard Application Pac with 17 pre-recorded programs, soft carrying case, safety travel case, Owners Handbook and Quick Reference Guide.

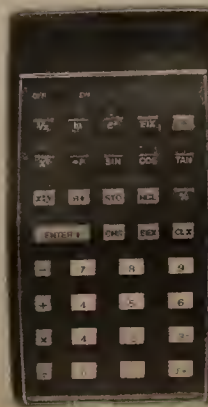

from the
university bookroom

HP80: the businessman's pocket calculator that's pre-programmed to solve hundreds of time-and-money problems.

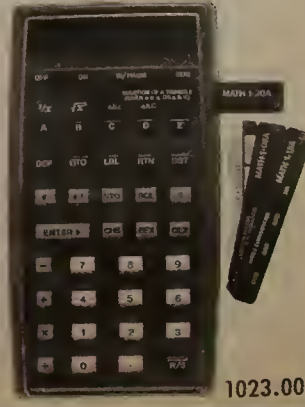

The HP-80 financial pocket calculator is a highly sophisticated computer-calculator which provides 36 separate financial capabilities, including bond yield and price, compound interest, mortgage payment and analysis, trend lines, rate of return analysis, accrued interest, discounted notes, true equivalent annual yield, annual percentage rate conversions, mean and standard deviation. And, the HP-80 has a built-in 200-year calendar.

Introducing

The NOJACK-1

Electro-magnetic Anti-Masturbation Device

After 105 years of research the Toike-Oike Corporation, the people who brought you the RU-7, devised a revolutionary new device by which one no longer has to go through the suffering and anguish of being a queer. This new milestone of engineering technology, (who says engineers never do anything for the artsies?) is the NOJACK-1 Anti-masturbation Device. This device consists of a coiled tungsten filament (ee ohms), 1 asbestos rubber lined glove (available in left or right) and 1 variable voltage AC-DC transformer with plug and adaptor for 220 volts if you plan a trip abroad.

How does it work?

Simply plug the device into an electrical outlet, don the glove, put the coil in your glove hand, set the dial on the variable voltage AC-DC transformer to HI (1000V) and proceed. When your weiner heats and you get that feeling of burning passion inside of you just think of how it felt the last time and if that doesn't work then repeat the procedure, it soon will.

There was a guy in a volkswagen driving down a country road one weekend. Just as he noticed that he had very little gas left night fall was upon him. Shortly after that it started raining. Luckily enough his car stalled in front of a farm house on this damp and chilly night, whereupon he proceeded to knock on the door of this humble mansion. After a good 5 minutes of knocking, banging and kicking at the door he proceeded to walk around the back of this house whereupon he found a light glowing through a window. As it was this light was coming from the kitchen window. He was stunned at the sight of the occupants in that house. For on the kitchen table, an old wrinkly woman was standing

Is it really effective?

Not if you got a cock made of iron. Does it have any ill-effects?

Your prick may be slightly burnt or charred and in cases of patients who really have the disease bad, their tool has shrivelled to the size of a thumbtack, from excessive ineffective treatments. But that is all right, when you get to that stage you will have nothing left to jerk so you are cured. Seeing as coil is not insulated, you may electrocute yourself but our engineers tell us it is safe if the diameter of the penis is over 1-1/4". (could be tense)

Is it expensive?

What is money when you consider the price of meat these days.

The non-biased opinion of this reporter is that this device could possibly cure the scourge of masturbation which has fallen upon our society but only if enforced through federal legislation. I suggest to you that you write your m.l. man tonight before you go to bed with your Playboy and tell him to vote Yes on the Ban the Meat Beaters Bill.

nude, wiggling her shrivelled up tits at an old man, also nude and on the same table, who was holding an umbrella over his head, while flailing his old wrinkled cock at her. Meanwhile, totally grossed out, the gentleman fled the scene and had managed to find another farmhouse down the road, where he could beg for shelter. He was accommodated for the night and in the morning he inquired to the head of the household about the queer sight of the old couple down the road. The farmer explained "They're deaf and dumb. She was telling him to milk the cows while he was answering 'Fuck you, it's raining outside'".

Words from the Good Book

This issue, we draw our inspiration from the Book of St. Mario, Chapter 5, Verses 1 to 19.

1. And they came over unto the other side of the campus, into the country of the Engineers.

2. And when she was come out of the street, immediately there met her out of the Annex a man with an unclean spirit.

3. Who had his dwelling within the Annex; and no man could bind him, no, not with problem sets:

4. Because that he had been often bound with assignments and problem sets, and the problem sets had been ignored by him, and the assignments copied: neither could any woman tame him.

5. And always, night and day, he was in the Computer Centre, and in the Stores, crying, and cutting himself with differential equations.

6. But when he saw Godiva from afar off, he ran and worshipped her.

7. And cried with a loud voice.

Late one evening...

He inauspiciously dimmed the indirect lighting in the richly panellied, plushly carpeted room as the voluptuous young girl made herself comfortable on the soft velvet couch. With two dry martinis in his hand he approached her and sat down next to her sinfully exquisite and supple body. He handed her her drink and she giggled menacingly in the soft moonlight as she slipped from it, feeling its warmth growing within her and feeding the passion that had been developing all evening.

Trembling with anticipation, he slipped his hand around her waist and snuggled closer to her on the couch - so close even as to make their two pulsating hearts beat as one with the love they felt for each other. With nothing but a small shaft of moonlight slipping into the room through a narrow separation in the closely drawn drapes, he felt his tie being loosened and his shirt

and said, What have I to do with thee, Godiva, thou Mother of the most high Joe Skule? I adjure thee by the Cannon, that thou torment me not.

8. For she said unto him, Come out of the man, thou unclean spirit.

9. And she asked him, What is thy name? And he answered, saying, My name is Artsies: for we are many.

10. And he besought her much that she would not send them away to Ryerson.

11. Now there was that day a Football Game, and there was night unto the Stadium a great herd of Queensmen drinking.

12. And all the SDS'ers besought her, saying, Send us into the Queensmen, that we may enter into them.

13. And forthwith Godiva gave them leave. And the unclean spirits went out, and entered into the Queensmen; and the herd ran violently down the steep bleachers

into the field, (they were about four score;) and made moons in the field.

14. And they that watched the Queensmen fled, and told it in the Varsity, and in the TV. And the Mickey Mice went out to see it was that was done.

15. And they came to Godiva, and see him that was possessed with the SDS, and had the Artsies, sitting, and with a beer, and in his right mind: and they were afraid.

16. And they that saw it told them how it befell to him that was possessed with the Artsies, and also concerning the Queensmen.

17. And they began to pray the Queensmen to depart out of the Stadium.

18. And when she was come into the Galbraith, he that had been possessed with the SDS prayed her that he might be with her.

19. Howbeit Godiva suffered him not, but saith unto him, Go home to thy class, and tell thy friends how great things thy Mother hath done for thee, and hath had compassion on thee.

buttons being undone one by one by the deft but gentle hands of his evening's companion. His heart pounded as he reached to the back of her satin dress and drew the zipper to the bottom of its travel, causing the fabric to fall away to reveal the luscious, soft, yet firm beauty of the perfect female form beneath it. In the smooth motion which only experience can teach, thus allowing that last encumbrance to be removed so that her complete delicate and frail beauty was fully exposed to his impassioned desire. His pulse was racing.

"I love you," he whispered into her ear as he felt its contour with his slightly parted lips.

"I love you too," she replied in that rich voice that held such power over him. "I love you more than I could possibly have ever imagined. I love you even more than my stereo set with the matrix quadraphonic

amplifier and the KLH speakers that I got last month at a real bargain because the dealership was going out of business. I got a Revox tape deck too with solenoid switching and a capacity for ten-inch reels. I checked out a Crown unit while I was shopping but I decided that the Revox was the best one for my purposes. I got a Marantz F.M. tuner at the same time that crosses over through the negative feedback push-pull input-output of the back of the amp's front end, yielding a signal to noise ratio of -65 db and an incredibly low 0.01% harmonic distortion. My amp gives a signal strength of 150 Watts RMS per channel, while operating at a low running temperature made possible by the inclusion in it of the latest in solid state and integrated chip circuitry. My turntable is a Thorens with a 15 inch tone arm that tracks at only 0.5 grams with an elliptical diamond stylus...

'75 GRADS OPPORTUNITIES

The following representatives from BUSINESS, INDUSTRY AND GOVERNMENT will be on campus throughout NOVEMBER to interview '75 GRADS for PERMANENT EMPLOYMENT. DEADLINES for applying to these companies will be in OCTOBER. NB. Some companies have their

application deadlines as early as OCTOBER 2 with the Placement Centre for specific details re-APPLICATION PROCEDURES, DEADLINE DATES, EXACT INTERVIEW DATES & JOBS DESCRIPTIONS.

The New Zoo

A month ago Toronto's first Metro zoo opened on 700 rolling acres in the Rouge River Valley. Almost from day one it was a smashing success. So smashing, in fact, the Metro Toronto Parks Department has felt the need to construct and staff a second Metro zoo, the opening of which is to coincide with the next transit strike. After weeks of intensive research, the Toike Oike Zoo Investigative Unit has compiled this secret dossier on the world's first Montessorio zoo — where each animal learns at its own pace in a completely natural environment. The site for the zoo is the newly vacated Toronto Islands. Using the twin resources of water and land, the Parks Department has sculptured six miniature model continental show cases on as many islands, each continent completely stocked with all the indigenous flora and fauna. Let's now take you on a preview tour on what is destined to be Canada's if not the world's, Zoo of the Future.

As you approach the zoo gates off the Hanlan's Point ferry docks, you will see that this is a family oriented cornucopia of entertainment and education — the price per child decreases with the number of children in the family. The first thing you see when you enter the zoo is the combination souvenir stand, Gray Coach stop, Customs Office and Crazy David's outlet. At the souvenir stand Mom and Pop can outfit Junior in world-travelling gear to make his visit to the zoo the memory of a life time. Such things as helmets with "ME BIG — HUNTER" to allow for the polygot ethnic composition of this great country, and a genuine facsimile of a Weatherly 500 Elephant Gun with simulated wood grain leather trim (Batteries not included). Postcards are also available to send back home along with windshield decals, pennants, bumperstickers, etc. Oh, and one last thing, please don't feed the animals, they are perfectly capable of feeding themselves.

Your first stop is the continent of South America — so near and yet so far away. Walking amid the lush rain-forests, you can see live jaguars stalking a few feet away with nothing between you and them but your plaid Birkdale sport shirt. But don't spend too much time on that cat, because you might still be able to catch a glimpse of a troupe of chattering lemurs absconding with baby Marvin. But don't dawdle here, follow a freshly made anaconda trail to Pirhana Channel, which must be waded through to leave the Continent of the Condor.

Following in the footsteps of Thor Heyerdahl and his raft Kon-tiki, we come to the Kingdom of the Kangaroo — Australia. Let's first take a look at that anomaly of nature — the wired platypus. (The Parks department, in Tommy Thompson's infinite wisdom has equipped each platypus with a shoplifting-deterrent system consisting of contact detonators and two pounds of Plastique.) But what the kids really came to see, the fightin' 'roo (after the Aussieslang) will be just inland of the beach underbrush. The kids will get a real "kick" out of the way those bouncy boxers run Mom and Dad right off the block. Avoid awakening the quiescent Koala, by the way those cute little "Teddy Bears" can become real tigers if they suspect you are a tourist! "Down Under" bids you farewell as you swim away, across shark-infested coral reefs towards the fabled shore of Asia.

Landing in the steaming jungles of Sumatra, you might be lucky enough to be met by the rare Imperial Army holdout; that shy, seldom seen creature whose natural habitat has, in recent years, been completely overrun by encroaching civilization. From this high level of evolution right down to the smallest malarial mosquito, no effort or expense has been spared to bring the true Asia to the foot of Bathurst Street. By the way, there is No Smoking in the zoo so some alternate means must be devised to

remove those pesky leeches.

Travelling cross-continent, you will share the Rainforest of Kashmir with those "Half-Tracks of the Animal World"; the elephant. Moving quickly now, as the first grey light of false dawn appears in the western sky — remember the zoo is open only from 1/2 hour after sunset to 1/2 hour before dawn — we swing into the dark continent, Africa.

Just as plants and animals are important to the understanding of an overall ecological pattern, so too are the aboriginal people. For the first two weeks only, the zoo is pleased to announce that David Frye will be doing impersonations of Idi Amin on a continuous basis. But Africa is a multi-faceted continent and, recognising this, the zoo designers have installed a Sahara section. Again perfect climate reproduction has undertaken to ensure the zoo visitors that correct night time, bone-chilling atmosphere. In fact, this section is so known for its peace, and quiet and attention to detail that even some zoo workers find it hard to leave.

But leave we must, as we approach the final stop on our global odyssey: our home and native land — Canada. Zut Alors! It is good to be home! As dawn draws ever nearer a vast herd of musk-ox and black yak thunders at your heels to guide you past the nesting grounds of wild Whelan Chickens, who lay their eggs already rotten, and the related winoceros.

As you race past the noisy frog pond, through a grove of plump trees and emerge in a small clearing, you discover the only portion of the zoo not yet constructed: the exit pavilion, which shouldn't be needed for quite a few months.

So ends our review of Metro's Second new zoo officially previewing this microcosm of nature its most true-to-life form will be the entire Metro and Borough councils with selected Federal and Provincial figures.

Laws of the University Perversity of Matter

First Law: Any mechanical or electrical device is most likely to fail the day after the manufacturer's guarantee expires.

Second Law: Any mechanical or electrical device with any malfunction short of complete breakdown will function perfectly in the presence of any trained serviceman.

Third Law: Matter will be damaged in direct proportion to its value.

Corollary One: If a mechanism is accidentally dropped, it will fall in such a way that the maximum damage will occur.

Corollary Two: Two or more things fall at right angles. (i.e., attempting to catch one or the other results in missing both).

Von Nagle's Constant

Von Nagle's Constant is characterized as changing the universe to fit the equation.

X' - Kf - X Where:

X - result obtained

X' - desired result

Kf - Von Nagle's Constant

Bougenre Factor

The Bougenre Factor is characterized as changing the equation to fit the universe.

X' - KbX Where:

X - result obtained

X' - desired result

Kb - Bougenre Factor

Diddle Coefficient

The Diddle Coefficient is characterized as changing things so that the equation and the universe

appear to fit; without actually requiring any change in either.

X' - KdX2 Where:

X - result obtained

X' - desired result

Kd - Diddle Coefficient

Combinations of the Above Quantities

For extremely difficult cases, or when maximum correlation between the equation and the universe is required, optimum results will be obtained by combining the Finagle Constant, Bougenre Factor, and Diddle Coefficient in the following manner:

X' - Kf - KbX - KdX2

Where all quantities are, as previously defined.

Into every CUSO Engineer's life a lot of rain must fall

The rainy season that brings the monsoons. The scorching summer months that steal the water...it's a cliché, but it does present many engineering problems. CUSO needs engineers to work in the world's developing countries. Talk to some Engineer's who have been overseas.

SAC Project Aid

Application Deadline - Nov. 1 1974

Project Aid is intended to offer financial support to worthwhile campus projects. It is hoped that programs applying for assistance will be open to all students of the university and be of interest to them all.

So for:

Campus Legal Assistance Centre
The University of Toronto Cheerleaders
The North Carolina Exchange

have received funds from Project Aid. In order to insure an equitable distribution of funds all application to Project Aid are required on or before Nov. 1.

For further information about Project Aid contact:

Bay Bloor Radio

ManuLife Centre

Bay Street at Charles

Phone 967-1122

Open 9-6, Thurs & Fri 9-9

We believe that Bay Bloor Radio is the best audio store in Canada. We offer the very finest equipment at competitive prices; free home delivery and hookup; extended warranties through a competent service department; and a trained no bullshit sales staff. Come and see us in the Manulife Centre (no, our overhead isn't any higher just because we have a beautiful store), check out our free audio seminars on most weekends, or just browse. We're good, and we're honest. And if you like this ad, please tell us, because otherwise, Toike Oike will never con us into a full page again. Thank you.

Arthur Meoff
Advertising Manager.

READER SURVEY REPORT

In case you missed it, the last (but not least) issue of the Toike Oike contained a consumer Questionnaire allowing you our reader to answer several rude personal questions and to generally give us an idea of your feelings concerning the Toike.

Most readers astutely recognized the whole thing as a ploy to feign journalistic responsibility and disregard it entirely, but literally many readers took it seriously (or many they wanted to take the joke one step further) and sent replies to our queries. Their attitudes towards the paper ran the full gamut of emotion from indifference through toleration to utter detestation, with the odd crackpot admitting an occasional lapse of good sense into an attitude of admiration.

Having a sporting nature, we have decided to publish some of these responses in their partial entirety, and herewith, herein, and henceforth they are:

50% said they read the jokes first, and the other 50% were evenly split among articles, pictures, serious stuff, etc. One respondent hinted that she would be happy to read the funny parts first if she could only find some.

One respondent said there was too much garbage in the Toike while the others said there was either not enough or quite enough. One approved of garbage and jokes, saying "If I want something momentarily profound or gravely critical I can listen to Walter Cronkite" (she obviously didn't realize that he is the source of most

of our jokes, and garbage). The same respondent (a female second year English Major) went on to say that she liked her garbage to be in good taste, with finesse.

Not a single respondent answered yes to the question of whether they find the Toike irresponsible, whether they are offended by it, or whether it should be discontinued (actually, the question was "would you support a cessation of the Toike?", which may have been read by some as "cecession"). But be that as it may.

WE at the Toike have taken this as a massive vote of confidence and will immediately undertake to expand our circulation and size to an extent rivaling that even of the Toronto Sun.

Frivolously though, the responses we received had a generally positive tone, congratulating the Toike for providing a worthwhile complement and even alternative to the Varsity. Some said they have enjoyed the Toike from their high school days and look forward to each issue. Many respondents wrote that the Toike transmits an image of engineers as fun-loving students, which seems odd because no-one who chooses to spend 30 hours a week in classes and labs could cherish fun all that much.

Demographically;
Our respondents were 50% male and 50% female (i.e. 50% our

respondants were 100% male, and 50% were 100% female), and 70% were arts students and only 10% were identified as engineers.

Note: several letters were obviously part of a mass organized write with accordingly, whatever that means.

THE WINNER OF THE BEST LETTER CONTEST FOLLOWS!

1. Do you read the Toike often?
Answer: You're damn right I do.

2. Do you read the jokes first, the articles or the serious stuff?
Answer: What's this about serious stuff? I didn't know the Toike printed stuff like that. Don't tell me you're infringing on the Varsity's copyright on truth, goodness and light?

3. Do you believe there is too much garbage in the Toike, in the way of racist jokes and crude articles?
Answer: What constitutes garbage? Garbage is in the eye of the beholder, a homey homily if ever there was one. I wouldn't worry about it if I were you, the Varsity's got you beat in the garbage department. Now for racist jokes. Well, I'm in a minority group (being a WASP), and consequently am not the least bit amused by racist jokes.

(By the way, why are we called White Anglo Saxons. Have you ever run across a black Anglo Saxon?) As for crudity, it too is in the eye of the beholder. Chacun a son gout.

4. What would you like to see? More jokes? More serious stuff? Less crudity? More witty humour?
Answer: I would like to see a girl with big lollies.

5. Would you be willing to write articles for the Toike? If so, humour, editorial content, jokes?
Answer: Yes, perhaps. What would you file this under: Humour, jokes, editorial content or circular file?

(ED: I would call it, "Hey John, Got Any Filler?")

6. Do you believe the Toike transmits an image of the rough and tough Engineer, crude boors, fun-loving students, no image at all.
Answer: All of the above. Who give a shit what image it projects as long as people enjoy it? If the engineers don't like the image the Toike projects of them, then let them change it.

7. Would you support a cessation of the Toike?
Answer: No way. It provides the only campus-wide alternative to the Varsity, and god knows we need

an alternative to the Varsity.

8. Do you believe the Toike is irresponsible?
Answer: No more irresponsible than the Varsity. In fact, less irresponsible than the Varsity.

9. Are you offended by the Toike? Do you care?
Answer: If I were offended by the Toike I wouldn't likely answer this bloody questionnaire would I? I care about the shape you're in, wonderful wonderful Toike Oike.

10. Do you have any suggestions?
Answer: Yes. I suggest that the Toike not run any more opinion polls. It ruins your image.

SOME FACTS ABOUT ME
Sex: Sometimes

Faculty: Applied woofing.

Year: In and year out.

Course: Inter

Are you a member of any campus group. Yes. The Society for the prevention of cruelty to dead budgies.

Are you a professor: Surely you jest.

Full-time student: yup yup yup

Do you write for any other paper: Yes, the very famous Toilet Paper, published thrice weekly at U. of T.

As W.C. Fields used to say —
You know a wife is like an elephant, nice to look at but I wouldn't like to own one.

SURPRISE ARTICLE

Hello friends, this is a surprise article. It is called a surprise article because it might contain a surprise. But then again it might not. If it doesn't contain a surprise, that in itself could be construed as a surprise - in which case there would be a surprise after all, which of course wouldn't be a surprise. This is what is known among logicians as a paradox. The classic example of a paradox - the one used by the Encyclopaedia Britannica in its article on paradoxes - is this one: "The following statement is true. The preceding statement was false." Pretty tricky eh? Try arguing that one out sometime when you've got a case of beer in you. Other famous paradoxes are the "twin paradox" of Einstein's Special Theory of Relativity, Frederick's paradox in the Pirates of Penzance, and the apparent paradox of Achilles racing a turtle with a head start - and being unable to catch up because each time Achilles reaches the point where the turtle was, the turtle has moved ahead to a new position. This last example is only a paradox to those clowns who can't see that the paradox lies in the artificial restriction implanted in the brain by the twisted logic used by the one who presents the paradox to his unsuspecting prey - which overlooks the point that at some instant Achilles will be so close to the turtle that his next step will carry him to a position in front of it.

Artificial barriers resulting from mental restrictions and misleading logic are one of the greatest handicaps to human achievement, particularly in areas of human relations and understanding. Last year in Canada alone over 2,000,000 people, or 1 in 10, suffered needlessly because of artificial mental barriers.

If you wish to learn more about this menacing scourge which threatens the very foundations of our Western Democracy, write to the Citizen's Committee to Solve Paradoxes and cure post-nasal drip, Room 211A, 10 King's College Rd., Toronto, Ontario. Or phone 928-2916 and ask Andy. (Also: Swedish and Scandinavian pictures. See anything.)

Dick Goes to a Interfac Game T*ike Editor gets The Stick.

On the evening of Oct 2 1974, our fearless editor was walking south towards Hart House when a strange man approached him with a stick in his hand. "Hey buddy, doya wantta hold this for me while I go take a piss?" not knowing what he was getting himself in for, our man took the bent aluminium pole (with the rings and numbers).

Then this crazy man in convict fatigues blew a whistle and the editor was pushed to the fore front and told to hold the aluminium pole (with the rings and numbers) in a certain place. So being the quiet, sweet, deadly handsome, intelligent (Thanks Richard I needed that) deep, and feeling sexually deviated pervert that he is, did as they said and moved the aluminium (with the rings and numbers) to where he was told. Then this goon, a faggot jock (?) after the noodles on the field had had a fight over a little ball, quickly ejaculated and gesticulated with his finger (and in public as well) that the editor should move the aluminium pole (with the rings and numbers) down the field a bit. The editor did not see why, so they took the aluminium pole (with the rings and numbers) away from him and made him hold a stick chained to another stick held by another man.

After being told if he held the chain tight all would be fine. All was fine except they made

him run out on the field a few times and he hates to make undo amounts of movement.

During the game, the SAC Press Seemore Canowitch and VP Tim Buckley (we made him famous last issue) came to watch. They had with them Frau. Gobbels and six camera crews to take pictures of SAC Pres at a proliterate football game. Anyway in comes this big guy, he was such a brute and I say my usual line, "Hey sailor looking for a good time?" (ED: get on with the story) Oh sorry.

Nothing really happened after that. The engineers lost the Vic cheerleaders got cold and I got bored. There were calls of poo poo refereeing, but being jocks they couldn't quite understand. (Jocks off campus). Later on I went to dinner at New College and ate Waffels and Marshmellow sauce. Then a Pharmacy II girl (initials D.E., don't worry Debbie I won't let anyone know) lured me up to her room to see her stereo. When we got there she closed the door lowered the lights, promptly tripped over them (I'll never know why anyone would put lights on the floor.), started purring in a soft husky voice "Make yourself more comfortable, take off your shoes," and we looked at the stereo. Being the Engineer I was, I suggested she turn it on (it seems she hadn't known about that also) and we listened to it. Then under the pretext of studying her

anatomy, she asked me to take off her clothes. Being upright and clean of mind I beat her off and ran out of her room thus retaining my threatened virginity.

Going back to my room I cried myself to sleep. (ED: what has this to do with a football game?)

Next Issue: Dick goes to a cultural Affair.

Bank of Montreal

The First Canadian Bank

We figure it this way: If we can be of help to you while you're a student, you'll stick with us after graduation—when we can be of even greater assistance.

So, come see us for advice on handling money. We can show you a few things that Economics 201 doesn't cover: how to save with a True Savings Account, how to cheque with a True Chequing Account, how to budget to make the most of your money, how to avoid running short. And we can discuss loans too.

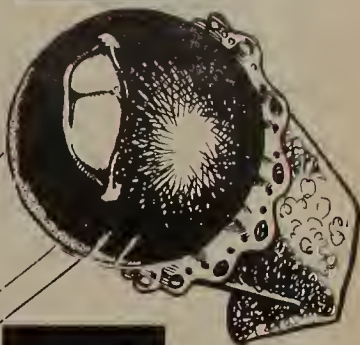

There's a Bank of Montreal nearby. Drop in, anytime. We want you to get your money's worth.

Start with
the bank
you'll stay with.

T*ikenickal Talk

The doctors at U of T health services have reported a large number of first year Engineering students complaining of headaches during lectures lately. Immediately we diagnosed this as a case of duondiferitis — faulty hard hat design, and sent out a team of specialists to prove the Health Service a bunch of quacks.

The hard hats tested were Kamlo "Groitrough" made by Rhesus De Beaque in his spare time in a small village in Wales out of recycled slag.

Our first series of tests concerned durability. In test one (not shown) the hard hat was dropped 1.4 times from the height of the CN Tower with no ill effects.

For our second test, we threw a cassette of Maxell recording tape at the hard hat. This test too failed to shatter the hard hat.

Our third test had to be scrapped due to Bobby Orr's refusal to cooperate on financial grounds.

Our fourth test, the fire proof test (see fig. 1) proved that these faulty hard hats were the cause of eight of the past twelve rooming house fires in Toronto in the past year. No doubt many of the frosh reporting to the Health Service with scorched crania were due to this fault in Kamlo's design.

Our fifth test in this series was for in-the-field wear. As can be seen, (fig. 2) after only 20 minutes of wear on the Spadina expressway, just south of Lawrence, the Groitrough Hat collapsed.

Our second series of tests were for lightness and comfort. It was found that the withe, yellow, and sky blue hard hats were very light, but the navy blue, forest green, and black hard hats were not within specs.

Comfort was, as listed by the manufacturer, Trofmoc spelled backwards.

Our third series of tests were for popularity and appeal. Our labs found the hard hats to have much more popularity and appeal than saran wrap with similar political decorations, but much less than that of plain saran wrap (fig. 3).

Comment: Overall, we found the Groitrough to be off-spec on almost all considerations, and nothing resembling state-of-the-art merchadise warranting its eight dollar price tag. On the other hand, the unique suspension — single five inch nylon strap running from the crown of the hat to the frontal lobe of the hard hat is surely destined to be a wave of the future*.

* very poor fonsorial punn.

Offensive True Farts

1. If you place a chimpanzee in an eight by eight room with nothing but a typewriter and fourth year Arts & Science math exam, in two hours he will write the exam and get 100%.

2. If you place an Engineer in the same room under the same conditions, less any beer, in three hours he will turn in to a chimp, and then write the exam.

3. If into this room you place an Eng. Sci. guy, by himself, he will either go to sleep or play poker with his friend Simon. He of course will not pass the exam.

4. If the Engineer in 2 is placed in the room with beer, with the stipulation he is to write the exam first, the exam will be written in five minutes (but not necessarily correctly). If not, then the beer will be consumed, and the test made into a paper airplane.

5. Stallions masturbate. This is done by thumping their sex organs against their bodies. Some do it so much that they build up calousses.

6. Eng. Sci. guys do not like girls. They in fact prefer the lowly three toed sloth.

7. Artsies do not drink or go to football games because, 'they are tuch brutal activities'. They prefer a rousing game of solitare and lemonade.

8. Mech Eng III make nifty replacements for bottle-openers.

9. Third year political Science students are so Naive, they think a shiek is a guy who rides through the dessert on a white stallion.

10. If you attempt to rap an Artsie in the balls, you will do no damage. (If you can find his balls).

11. Pharmacy students make good bar stools, eat ketchup on rye for dinner and are spiffy dressers. They also get paid alot of money when they graduate to dispense bottles of aspirin.

12. The B.F.C. is an underground extension of the S.D.S. (silly damn socialists).

13. The Toike-Oike is recomended by four out of five dentists, for their patients who chew gum.

TRACK

As promised Engineering staged an attack on the interfaculty track championships. As things turned out it wasn't very organized with Terry fishing in all his fellow commissioners and classmates. All in all be brought about 20 friends. Fortunately a few compentents also showed up. Conditions weren't great but the weather didn't douse Skule spirits. After the first events the stage was set for a tight duel between Engineering and Vic for the rest of the day. When the points were finally tallied Vic won with 127 points against Engineerings 101. For all who participated congratulations are in order as this is the first time Skule has entered a team in F! years.

Special thanks to Andy Higgins and his Phys Ed boys and especially the girls who organized the meet from all us Engineers who participated.

Engineering Sales

A seminar will be held on Thursday October 24 at 12 and 1, for Electrical Mechanical, Civil, Nuclear and Thermal Power Grads. The purpose of this seminar is to interest graduates in a career in Engineering Sales. Since this seminar is being presented by Trane Company of Canada Ltd., There will be some emphasis on Engineering Sales in The Air Conditioning, Heating, and Heat Transfer Area.

ENGIN EERING RUGGER

The engineering I team got to a good start with victories in their first two games, 12-8 against Vic, and 4-0 against a depleted P.H.E. team. The Vic game was a hard fought affair with many hard tackles being administered by both teams. Charlie Scott scored on a quick dash from a 5-yard scrum and Brian McChesney, who ran well the entire game, scored a sensational try in a fast run down the left wing in which he broke several tackles. Juris Balins did a fine job of converting both majors. Brian Smith scored in the Phys. Ed. game.

The second team did not fare as well losing 6-0 to Law in their first game. But the team has lots of promise and could easily come up with a few surprises before the season ends.

Practices are at 8:00 AM - 9:00 AM Tuesday and Thursday morning on the back campus. Everyone is invited to attend, on phone Paul Thompson at 925-5797.

V.P. Administrative

At the Engineering Society Council Meeting of October 9, Andy Schwabe was acclaimed as V.P. Administrative Keener points given for picking him out of the McGill pictures.

WOMEN'S SQUASH SPORTS:

Engineering's basketball season began with a victory over Dentistry last Thursday. The fact that it was due to a default on their part is clear evidence of our intimidating reputation. We have a good team this year and expect to do well. Our next game is tonight at the Benson Building.

Ice hockey will begin practices in November and games will begin in the new year. Practices will be posted in the second floor women's lounge of the Galbraith Building all you need to supply is a pair of skates, and mouth guard and yourself.

This is a learning league, no previous experience required.

The list of all persons who signed up for the engineering squash teams is on the bulletin board beside the stores. Because of the large turnout I need to know how many are still interested, and also need the names of people who missed the first meeting. Please arrange to play someone on the list so that you can be rated. Also squash team T-shirts can be purchased for the small sum of 3 dollars, cash on the barrel head on Monday Oct 21 from 12 to 2 in the Industrial common room. You must order one as they will have SQUASH printed on them and I need to know how many. See Larry Miller in the Roseburg building on Mon the 21. Remember that the season starts shortly so lets get moving.

There is an Australian who doctor filled the referee's balls with cream instead. So the referee went home to his wife and resumed a normal sex life. So they lived happily ever after except that nine months later the bloke's wife gave birth to an eight pound brick of cheese.

A: That's about as good as it gets. Q: Do you know what Australians are proof of?

A: That's about as good as it gets. Q: Did you hear about the Australian who didn't want his wife on the pill? So he bought her a condominium.

A: Mostly American & Japanese. Q: What is the capital of Australia?

A: Kangaroos. Q: What's grey and comes in quarts?

A: Usually by the ears. Q: How does an Australian woman hold her liquor.

workcrews 3 hrs. to get the bus out. A bus full of spastics on its way to Manning Beach rolled over and fell into a large gully. It is reported to this paper that it took come to our attention.

We are of course not in any way accusing the Australians of negligence or of total disregard for persons afflicted with physical disorders (but we all know this to be a fact) yet this news item has but he burned his lips on the exst pipe.

Did you hear about the Australian who joined the IRA? His first assignment was to blow up a school bus full of children ...

A: A dumb, rich sterile nymphomaniac who owns a pub. Q: What is the ideal wife for an Australian?

For added effect try pinching you nostrils to get that nasal effect. Captain Slick.

When the vice squad came by. And that all we was doing. In skirts and avin fun, Australians like dressin up.

They'll smash tm in the face. If they ever sl a tiry poem. They're god's own chosen race. They're god's own chosen race.

Australia is a lovely place. It's full of bonza blokes. Sheilas, beer an' no one's queer. 'cept in pommey jokes.

Would say it then here you are. them ones from the outback, ie. Sidney, aren't really Australian) are wonderin' just how Australians (and I mean Wattlebarkers, boza) is a slang for good, and we ARE God's chosen race. If you Sheila is a woman (other slang, skirts or damed) bonza (as in beaut is your typical garden variety Briton (ie. Limmey or English), a Australian, a few things must be explained. First of all a Pommey ED: For those of you unfortunate enough to not be born

A Jewish guy in New York captured one of the big - money prizes in the Irish Sweepstakes. The moment he found out he'd have to pay income taxes on all that swag, he began making inquiries and found that if he moved to Ireland he would not have to pay a penny in taxes. So he moved to Ireland.

A year later he was able to apply for citizenship papers. He was told to report for a physical examination and when it was over, he was refused citizenship because of the fact that he had been circumcised.

He thought about it for a while, and then addressed a plaintive letter to Ireland's government. He started off by narrating what had happened, and then he wrote:

"This is a fine thing! In my country, the United States, I already know that a man has to be one hundred per cent Protestant to become a Mason. He has to be a hundred per cent Catholic to join the Knights of Columbus. But this is the first time I ever heard that a man has to be one hundred per cent prick to be an Irishman."

St. Mike's prayer: Oh, blessed Virgin, thou who didst conceive without sinning, teach us to sin without conceiving.

A big Catholic layman named Fox Makes his living by sucking off cocks.

In spells of depression He goes to confession, And jacks off the priest in his box.

There was a young Catholic named Alice, Who peed in the Bishop's new chalice;

But that worthy agreed That 'twas done out of need, And not out of Protestant malice.

Q. What do you get when you cross Charles Laughton with a ham sandwich? A. The Lunchback of Notre Dame.

Rugby: A game played by men with peculiarly shaped balls. Welsh Rarebit: A Cardiff virgln. Wild Goose: One that is one inch off center. Mother's Day: Nine months after tather's day.

Question: How can you spot a blind man at a nudist colony? Answer: It isn't hard.

The shapely topless dancer went to mass dressed in her working clothes but was stopped at the door by the priest. "Miss," he said, "you can't go in like that." "But, Father," protested the St. Mike's churchgoer, "I have a divine right." "And your left isn't bad, either," the man of the cloth responded, "but you still can't enter the church without covering your head."

'Twas the night of the King's castration. The King sat there in his diamond-studded jock-strap Around the big round table, With all the counts, bicons, tricons, And God-damned no good accounts Throwing camel dung at each other For in those days, bullshit was not yet invented.

Up rode David in his chariot. "Whoa", said David (the chariot stopped) David approached the King, inquiring: "King, where is the Queen?" enquired David. "Oh, fuck the Queen!" answered the King. That sorrowful day ninety-one thousand and sixty-five were killed in the rush (For in those days the King's word was law).

"Well where is your daughter?" "My daughter is in bed with Pneumonia" replied the King. "What!! That Greek bastard still here??" exclaimed David. "Throw that man in the deepest dungeons and send him to Fight the lions next Saturday." the King announced.

David was thrown in the dungeons and later emerged to fight the lion, David approached the lion and grabbed his left testicle "That tickles." said the lion. "What tickles?" replied David. "My left Testicle." said the lion

Again David approached the lion, grabbed him by his Tail, and swung him around three times (over his head). Shit flew at random, Random (being a wise fellow), ducked, Shit hit the King "Shit!!" said the King There was a movement in the crowd, (For in those days, The King's word was law).

After the fight, David again approached the King And inquired "Where is your daughter??" My daughter is up in the Royal Bedchamber. David went up, and sure enough the princess was lying on The Royal Bed. (on her back no less) "Roll over!!!" commanded David. "I'll be fucked if I'll roll over!!!" Exclaimed the princess. "Aye and Ypu'll be fucked if you don't!!!" rejoined David.
